Gloucester County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **Gloucester County** dating back to **March 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

Top 5 Primary Impression Categories

James City County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for *James City County* dating back to *March 2023*. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

Top 5 Primary Impression Categories

Mathews County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **Mathews County** dating back to **March 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

Invalid selections

York County EMS Assessment (Opioids)

These visualizations provide a general overview of the number of EMS responses for **York County** dating back to **March 2023**. The data used to create them contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported. The Top 5 Primary Impression Categories chart shows the 5 most reported responses by primary impression categories.

VDH Health Districts (All Substances)

The chart below displays the total number of EMS responses by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most responses regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement dating back to **March 2023**. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

The chart below displays the total number of EMS responses by VDH Health District relative to the per capita populations. From left to right, the chart orders the districts from highest to lowest based on the rate of overdoses relative to per capita population. This order highlights the regions with the most responses regardless of population size. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve opioid or have suspected opioid involvement dating back to **March 2023**. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

VDH Health District EMS Responses Relative to Per Capita Populations

VDH Health Districts (All Substances)

These charts display the percent change in EMS responses over the past month and year, allowing for easy identification of regions that have seen a significant increase in responses recently. The Month-to-Date Change in EMS Responses focuses on the change in EMS responses over the past month. Similarly, the Year-to-Date Change in EMS Responses displays the change in responses for each region, but it shows the change over the past year rather than the change over the past month. The data used to create it contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement from the current and previous year. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported..

Month-to-Date Change in EMS Responses

Year-to-Date Change in EMS Responses

*Aggregations using 5 or less entries will be masked and removed from visualizations.

Locality

VDEM Region: 5

The table below provides an overview of the localities in **VDEM Region 5** as the locality or localities of focus dating back to **March 2023**. This is meant to allow for comparison to see how different localities in the same region are handling substance overdoses. The data used to create this chart contained Emergency Medical Services (EMS) information for reported responses that involve a substance or have suspected substance involvement. It is important to note that records in this dataset include instances of both fatal and non-fatal overdose among reported.

Locality	Q	VDH Health District	Q	Most Common Substance	Change from Previous Month (All Substances)	Change from Previous Year (All Substances)	Responses (All Substances)	Change from Previous Month (Opioids)	Change from Previous Year (Opioids)	Responses (Opioids)
City of Virginia Beach		Virginia Beach		Opioid	48	45	2,939	3	-7	793
City of Chesapeake		Chesapeake		Unspecified	18	-28	1,065	8	-14	379

Data Citation

Dataset	Emergency Medical Services (EMS) information for reported incidents that involve a substance or have suspected substance involvement
Source	VDH – Emergency Medical Services
Date Range	3/1/2023 - 3/28/2025
Details	Data includes aggregated details on substance use incident responses. Displayed data are counts of events that match the filtered selections
Geographic Granularity	Presented data shows the number of EMS incident responses for a Locality or FIPS code but does not show where an incident response occurred within the locality.
Demographic Granularity	Presented data shows the number of responses for individuals who meet the demographic selections but does not show records for any specific individual.
Time Granularity	Presented data has been grouped into the year-month for when an EMS response occurred.
